FOREWORD

AGRICULTURE, although Pennsylvania is recognized as a great industrial state, represents a larger capital investment than mining or the manufacture of primary metals. The total earnings in cash income from Pennsylvania farms was \$264,239,000 in 1939. Pennsylvania has 191,284 farms valued at \$861,706,599, according to the Federal census of 1935. The livestock, including poultry, on the farms January 1, 1940, was valued at \$158,405,000. The implements and machinery owned by Pennsylvania farmers are worth upwards of \$150,000,000. Summing up brings the total investment in farms, livestock, and equipment to \$1,170,111,599.

PENNSYLVANIA 1939 CROP PRODUCTION ABOVE AVERAGE

VALUE of the principal field and fruit crops in Pennsylvania in 1939 is placed at \$137,996,000, compared with \$127,663,000 for 1938, an 8 percent increase. Combined production of the ten major field crops was about 2 percent larger than the ten-year average and only about that much less than the favorable 1938 outturn, despite the peculiar season. The acreage, exclusive of fruit and truck crops, planted to the ten principal field crops this year was 1 percent less than 1938, but the acreage finally harvested was about 2 percent below last year because of the abandonment of some crops due to weather conditions. Yields, while they varied widely among communities, averaged rather high for the entire State, especially in view of the prolonged dry spell which occurred in several sections.

Farm prices for the present calendar year were relatively low until the sharp upward rise in September occasioned by the outbreak of war. Later, prices generally declined but are now on a higher level than a year ago. If recent gains in factory payrolls and employment are carried over to 1940, prices of farm products are expected to be improved or maintained at the more favorable level.

CORN The acreage of corn has been constant for the past three years. Very good crops have been harvested and, while the average yield in 1939 was somewhat under both 1938 and 1937, it was still 3.5 bushels above the ten-year average.

WHEAT The wheat crop was particularly successful in 1939. Acreage had been reduced sharply but yields were high and a production 5 percent above average resulted.

OTHER GRAINS For the third consecutive year the barley crop has established a new record for the State. Acreage in 1939 was increased sharply and yield equaled the high record established in 1938. The buckwheat crop suffered a poor start and was the smallest since 1930 and the second lowest production in 30 years' record. Acreage of soybeans harvested for grain was double last year.

POTATOES The potato crop was about the same size as last year but a small crop, compared with the ten-year (1928-37) average. Quality was varied and late rain caused much second growth. Early varieties suffered from lack of rainfall and many small tubers resulted.

TOBACCO Pennsylvania filler tobacco withstood the earlier threats of drought and rust and, although somewhat irregular in stand, matured a good crop under very favorable fall weather. Havana Seed was retarded by dry hot weather and did not fill out satisfactorily.

HAY AND PASTURE Hay crops were generally light in the eastern half of the State while the western half made good yields. Pastures were not up to standard and supplementary feeding was required in the dry areas. Additional replanting of new hay seedings was necessary in some sections. Pastures did not show much recovery during the fall as precipitation for the State was 19 percent below normal since September, which was reflected in the low condition of winter grains, in the

shortage of wells and stock water and in the moisture deficiency in both surface and sub-soil.

FRUITS Cherries and peaches were plentiful and moved at fair prices. Many apple orchards were not completely picked as prices were depressed by the dull export market resulting from the war. Production of grapes in the Erie Belt was about average but 48 percent larger than last year.

FARM LIVESTOCK INVENTORY, JANUARY 1, 1940

TOTAL combined farm inventory numbers of the five species of livestock—horses, mules, cattle, sheep and hogs—on Pennsylvania farms January 1, 1940 was three percent larger than on January 1, 1939. The number of cattle and hogs on farms at the beginning of the present year was greater than at the beginning of last year but the number of workstock and sheep and lambs on hand declined for the third consecutive year. Upward trends of dairy and beef cattle population were particularly evident in the young stock classifications. Swine numbers were the highest for the State since 1928, and chickens on Keystone farms continued to expand having gained about 4 percent during 1939. Farmers were wintering on January 1 the greatest number of cattle in the past twenty years.

Cash farm income from livestock and livestock products in Pennsylvania for 1939 totaled \$189,169,000 which represents a reduction of three percent from 1938. Nevertheless, the State continues to rank tenth in the Nation in respect to this important source of cash farm income.

HORSES & MULES In the past three years the number of workstock on farms fell about one percent a year. The number of young replacement stock has shown no significant change, indicating that further decline in work animals might be expected for the State. The bureau of animal industry of the Pennsylvania Department of Agriculture reported 453 stallions registered during 1939 compared with 447 in 1938.

CATTLE The number of cattle and calves on farms at the start of the current year was the largest for the State since 1920 and far exceeded the inventory numbers of any year during the War decade (1910-20) with the exception of 1920. Excluding 1920, the inventory estimate for 1940 was the largest since 1904 and practically equal to the high point reached at the start of the 20's. Cattle numbers have tended steadily upwards since 1927 when they numbered 1,250,000. Many believe that cattle numbers are approaching the peak of their upward swing. Milk cow numbers have followed the trend of all cattle and on the first of the year were the largest since 1917. Contributing to the large number of all cattle on hand is the sharp increase in dairy calves and heifers not of milking age. Dairy cattle increased two percent. Although beef cattle of all classes, representing a small portion of total cattle, increased about six percent during 1939, the number of steers on feed was slightly less.

HOGS The rapid upswing of hog production that started in the spring of 1938 throughout the nation as a whole was reflected in the larger number of hogs on Pennsylvania farms on January 1, 1940. This year's inventory number was the largest in twelve years, partly due to the large pig crop in 1939. Hogs have declined \$2.60 in value per head from a year ago.

SHEEP & LAMBS The number of sheep on farms for the State has declined for the past four years, and is now the lowest since 1927. Prices recovered from the low levels a year ago and total farm value of this species has increased slightly.

POULTRY The number of chickens on farms was the second highest in the past 16 years and Pennsylvania maintains a front rank in the nation's poultry industry. The turkey business is growing rapidly in Pennsylvania and the number of turkeys on farms January 1, 1940 was 42 percent greater than on January 1, 1939.

LAND AREA AND ACREAGE OF PRINCIPAL CROPS, BY STATES

State	Land area		Total acreage of principal crops 1/

California	99,617,280	30.6	5,179,100	5,419,000	5,378,000
UNITED STATES	1,903,216,640	55.4	341,328,500	341,743,600	325,448,700

1/ Includes corn (all), wheat (all), oats, barley, rye, buckwheat, flaxseed, rice, grain sorghums (all), cotton, tame hay (all), wild hay, sweet sorghums for forage and hay, timothy seed, sweetclover seed, dry edible beans, soybeans for beans, cowpeas for peas, peanuts for nuts, velvetbeans (total), sorgo for sirup, sugarcane, sugar beets, potatoes, sweetpotatoes, tobacco, broomcorn, asparagus, snap beans, cabbage, cantaloups, carrots, cauliflower, celery, sweet corn, cucumbers, lettuce, onions, green peas, spinach, tomatoes and watermelons. The acreage of red and alsike clover seed, lespedeza seed and alfalfa seed are assumed to be included in the tame hay acreage.
